

GI-RADS Score for Transvaginal Ultrasound - Final Report

Patient Information

Identification Data		Adnexal Masses		TV US Realization	
HRN:	GIR00000034	Findings:	Yes	Date:	18-02-2018
ID Card:	Unknown	Cyst:	Unilocular Simple		
		FO:	None		
		SO:	None		
Menstrual Cycle		Thick Septations:	No		
Stage/Phase:	Follicular Phase	Papillary Projections:	No		
		Ascites:	Yes		
		Solid Areas:	No		
Outcome		Vasc.:	Peripheral		

Results

According to Transvaginal Ultrasound Information, there is a MODERATE RISK (GI-RADS Score = 4) of having GYNECOLOGIC CANCER.

Conclusions

WE SUGGEST MODERATE MALIGNANCY RISK (PROBABLY MALIGNANT FINDING), PURSUANT TO THE GYNECOLOGIC IMAGING REPORT AND DATABASE SYSTEM (GI-RADS).

This report has been generated from the data entered on 18-02-2018 15:52:20 UTC/GMT.

Disclaimer

Bioprognos has not developed the Gynecologic Imaging Report and Database System (GI-RADS). GI-RADS was proposed in 2009 by Amor et al. as a reporting system similar to that used for breast ultrasound (BI-RADS), and developed to facilitate communication between sonologists/sonographers and referring clinicians. Bioprognos has implemented it for training or educational purposes only. You assume total responsibility for your use.
