Order Date:	<input type="text"/>		

Disclaimer

According to Annex VII of Medical Device Directive 93/42/EEC, Class I, Rule 12, OncoCUP Dx is a non-invasive blood test useful to suggest a possible diagnosis in patients with suspected malignancy, reduce inappropriate diagnostic tests, days of hospitalization, as well as morbidity. It is specially designed for patients with paraneoplastic syndrome and/or suspicion of advanced neoplasia, which the clinician can focus on tests that confirm the diagnosis, avoiding others to look for chronic or other benign diseases, as well as patients with cancer found in one or more metastatic sites but not the primary site.

OncoCUP Dx is based in a panel consisting of 15 serum Tumor Markers (AFP, β-hCG, CA 15.3, CA 19.9, CA 72.4, CA 125, CEA, CYFRA, HE4, NSE, ProGRP, PSA, fPSA, SCC and S100), as well as clinical data to obtain the best performance (Sensitivity of 82.4% and Specificity of 98.1%), by reducing the number of false positives generated by benign comorbidities and other well-known causes.
